

INTEGRATED SOLUTIONS

PRODUCT | TYLER DATA VAULT

An act of nature, theft, vandalism, fire or a faulty sprinkler system—a disaster can strike at any time, and without warning. That's why a disaster recovery plan is crucial to the security of your information, and the efficiency of your organization. But it's a fact—a disaster recovery plan is only as good as the data that is backed up. Organizations must be confident that their backed up information is always current, safe and easily accessible.

Data Security

One in five computers suffer a fatal hard drive crash during their lifetime. 44% of data loss is caused by mechanical failures. With statistics like these, it is imperative that organizations have a guarantee that their information will be safe, stable, and easy to access in the event of an emergency.

Tyler's Data Vault service, part of our Disaster Recovery Services solution, is the answer to complete data security. Secure, easy to use, and cost effective, Tyler Data Vault quickly and easily encrypts and backs up all current Tyler application data to our Tyler facility over the Internet through secure file transfer protocols so information is protected from unauthorized access or usage. Information is secured in an off-site location, and can be accessed quickly and readily—even remotely—in the event of a disaster.

Easy Access to Valuable Data

Tyler's Data Vault solution is a cost efficient and convenient way for organizations to back up their important Tyler application information. Tyler can have your data restored to a server within our ASP hosting environment within hours—because we understand how priceless information is following a disaster.

Tyler Data Vault backs up an organization's data daily five times each week so information is always current. What's more, organizations have 24 hour access to their backed up data, so users can always access what they need, when they need it. Users can also opt to receive quarterly CD/DVD backups for an additional fee.
